## Ks0268 keyestudio SHT10 Digital Temperature Sensor

### Introduction:

Keyestudio SHT10 digital temperature sensor is a temperature and humidity composite sensor containing digital signal outputs calibration. It uses patented micromachining technology (CMOSens®) in the process of industrial COMS, which ensure that the product has high reliability and excellent long-term stability. Sensor has full scale calibration and two digital interface, which can be directly connected with the microcontroller. It has the features of high reliability, strong stability, rapid response, low power consumption, strong anti-interference and accurate dew point measurement and so on.

### Specification:

Supply Voltage: 5V  
Current: >20mA  
Interface: Digital
