UTE9800+ Series Smart Digital Power Meter

1. Characteristics and Advantages

◆ VA broken code screen display, reading intuitive, it adopts high speed A/D transformer and 32-bit MCU operation.

◆ Measurement parameter of each window can be switched (only for UTE9806+).

◆ Multi-window simultaneous display of voltage, current, power, power factor/frequency.

◆ Support measure voltage crest ratio, current crest ratio (only for UTE9811+).

◆ Voltage, current range can switch to auto range or manual range.

◆ Support AC, DC, AC+DC (T-RMS) mode (only for UTE9802+).

◆ Support harmonic measurement, harmonic measurement adopts phase-locked loop (PLL) synchronization method. The maximum of harmonic analysis is 50 times (only for UTE9811+).

◆ Average function can make the reading more stable and it suitable for measuring the load or power with large variations.

◆ Data upgrade period can be set. User can select a faster upgrade period according to the test needs, so as to improve the test efficiency.

◆ Communication interface supports RS-232 and RS-485. Communication protocol supports SCPI and Modbus for communicating with computer and PLC.

◆ It can freely set the upper and lower limit of current and power, the digital power meter will automatic judge whether the test value is exceed. Sound and light alarm indication, it is convenient for batch detection to improve the measurement efficiency.
(UTE9806+ is also supports set the voltage, apparent power and set and detect the upper and lower limift of power factor.)

2. Product Introduction

The smart digital power meter is an economic and portable measuring instrument. It is a multi-functional measuring instrument which integrating voltage, current, power, power factor, frequency and harmonic wave. The product is widely used in production, testing, evaluation and scientific research and multi-field.

UTE9800+ series include three models: UTE9802+, UTE9806+, and UTE9811+. It adopts high speed CPU for data processing, the sampling resistance of voltage and current are all use low temperature drift resistor, therefore, the stability and accuracy of measurement data are guaranteed.

UTE9800+ series has true RMS measurement; it can adjust to the electric parameter measurement of various occasions such as full wave, half wave (AC/DC type) and irregular waveform. This instrument can measure voltage (V), current (A), active power (W), apparent power (VA), voltage peak (Vpk), current peak (Apk), power factor (PF), frequency (Hz), harmonic wave and wave crest ratio. It has perfect functions, superior performance and simple operation.

The instrument can meet the needs of high-speed measurement in production sites, as well as laboratory and R&D measurements. It is widely used in in the fields of lighting appliances, power tools, household appliances, electric motors and electric heating appliances of production lines, laboratories and quality inspection departments.

3. Design Highlights

VA broken code screen display, data and state display directly

UTE9802+   UTE9806+   UTE9811+

Multi-window can display voltage, current, power, power factor/frequency at the same time and can display the measurement mode, scale state, alarm state directly.

AC/DC design for measuring the maximum 700V of voltage and the minimum 0.5mA of current

UTE9802+ supports AC/DC measurement mode, the measurement range of voltage is 3.0V~700V, the measurement range of current is 0.5mA~24A. It is suitable for AC/DC charging pile, power battery, home appliance test and standby power consumption test.

Low voltage and low curret measurement

UTE9806+ supports apparent power measurement mode, the measurement range of current is 0.05mA~0.5V. It is suitable for measuring overall power consumption.

Innovative harmonic processing algorithm

UTE9811+ supports harmonic measurement, it adopts phase-locked loop (PLL) synchronization method and combine with the innovative digital signal processing algorithm, which makes the

update rate of harmonic measurement data up to 0.1s, it greatly improving the test efficiency, so as the precision of harmonic measurement is higher than other similar products.

Automatic Range Measurement

UTE9800+ series are all have automatic range switch function, automatically select the suitable measurement range to make the measured results more accurate.

Multiple function of limit setting and alarm

UTE9800+ series can set the upper and lower limit of current and power. It supports two alarm mode audible and visual alarm. It can be used to monitor the current and power in the home circuit (UTE9806+ also supports set the upper and lower alarm function for voltage, apparent power and power factor).

Fall-proof Design

UTE9800+ series have eight stands with silicone angle protection in front and rear. The desgin can protect the instrument's input terminal and display screen when it falls, thereby increasing the service life of the instrument.

**Multiple interface and communication protocol**

UTE9800+ series supports RS232 and RS485 communication interface and with SCP, Modbus communication command. It make sure that the instrument has good compatibility in the system integration of automatic test equipment.

Complete upper computer control software

The instrument can be remote control via the upper computer control software, it can also visually display the measurement data and the historical trend of the measurement data, and save the historical data to the computer in CSV file format for further analysis.
