

PWM DC motor governor switch function 1803BK

Ultra-low voltage DC motor governor

Input DC1.8-15V voltage range

Applicable current within 2A

Tape switch function

Product with self-restoring fuse,

The current is too large and automatically disconnected, and the fuse automatically recovers after cooling.

Very practical!

Size: Length width 32mm*32mm height about 14mm

Net weight :14g

Special reminder:

Dc motor governor connected to DC power supply,

Do not directly connect to household 220V AC,

Otherwise the damage consequences!

This is A 2A maximum current governor, continuous current greater than 0.5A, 775 motor, stroller motor is not moving. It is not recommended that the power supply is greater than 12V, such as 12V lead-acid batteries, which may cause damage to the governor.
