DBS / CATV / CCTV Video Cable
RG59 95% Braided Siamese Cable
Power Video Cable

Siamese cable refers to a type of combination cable that makes it possible to run two types of wiring – typically for power and data transmission – to a given location through a single cable.

Siamese cables offer cleaner and more organized installations, and are commonly used in video, surveillance camera and closed-circuit television (CCTV) applications.

Equipment can be wired for power and signal without the installer having to use separate cables for each type of connection.

Length of Cable in drum	1,000feet / 305m
Certification	UL
Conductor	Copper
Coaxial Cable Type	RG59
Application	CATV, CCTV, DBS
Structure	RG 59 + 2 Power wires
