

**Model: JLH099-30W**

**Product introduction:**

Electric dual-use Suction device + Soldering Iron

Voltage: 220V

Power: 30W

**Instructions for use:**

Use voltage 220V, power 30W.

Turn on the power and warm up for 3-5 min.

Push the piston handle down and hold it. The tip of the tip of the soldering iron is aligned with the solder joint of the component to be removed. After the solder joint is melted, press the control button and the solder is sucked into the cylinder.

The suction device is equipped with two suction tips with different diameters, which can be selected according to the insidious thickness of the component.

Soldering is performed in the same way as using an electric soldering iron.
