

KE0007 keys sensor expansion board red environmental protection

Overview:

UNO R3 expansion board

The keys sensor expansion board is an expansion board used in conjunction with the Keyes UNO R3 development board. It expands all the digital ports and analog ports of the Keyes UNO R3 development board in the form of servo line sequence. It also has an IIC interface, serial communication interface, and SPI. Communication interface, NRF24L01 wireless module communication interface and other interfaces.

For Arduino beginners, there is no need to worry about the wiring of cumbersome and complicated circuits. This sensor expansion board really simplifies the circuit and can easily connect commonly used sensors. A sensor only requires a universal 3P Sensor cable.
