

Mask breathing valve accessories breathing valve piston air valve mask accessories kn95 protective accessories

The uses of mask breathing valve:

In a working environment with humid heat or poor ventilation or heavy workload, using a mask with a breathing valve can help you feel more comfortable when exhaling. The function principle of the breathing valve is that the positive pressure of the exhaust gas during exhalation blows off the valve piece to quickly remove the exhaust gas in the body, reducing the sultry feeling when using the mask, and the negative pressure during inhalation will automatically close the valve to avoid suction Pollutants entering the external environment

Product use: N95, N94, N90, KN95, KN90, medical masks, dust masks, PM2.5 dust masks, etc.
