## KE0008 keyes MEGA 2560 prototype extension board red environmental protection

### Overview:

MEGA 2560 sensor expansion board

The MEGA 2560 prototype extension board is an expansion board used with the ARDUINO 2560 R3 development board. It is used to build a circuit prototype. You can solder components directly on the board, or you can connect the circuit through the mini breadboard above. The breadboard and the circuit board are connected by double-sided tape. When sold, the breadboard and the circuit board are separated.

The MEGA 2560 prototype extension board has two LEDs and two button circuits, which can be used directly. All pins and power have been drawn out, which is very suitable for building circuit prototypes with Arduino.
