

Product spec sheet

TIE MATERIAL

This product consists of rolls of slit steel material that has been punched with seal insertion holes. The material is designed to provide a security sealing point for applications where standard seals are too short. The material is cut off at the appropriate length, looped together to join the slits and a security seal is then inserted into the slit to seal the loop.

Features and Benefits

- Used in applications where a standard seal is too short.
- The tie material is used to secure the area and a numbered seal is used to complete the secure.
- Short seals can be used and the seals unique serial number is used for the audit tracking trail.

Dimensions

- Width 5mm
- Thickness 0.3mm
- 35m long rolls

Material/Strength

- Slit steel

Applications

Gates, Fences, Trailers, Values, Bags/Sacks On any other application where the sealing length is longer than usual.
